Adsense Channels: Add link – You can use this to upload the text file of your adsense channels, amazon code, chitika code and/or YPN code. By clicking the [Browse] link you can browse the text file from your local folder. After selecting the file to upload you just need to click the [Add] command button to add the text file in the adsense channels. Whatever the name of your text file will be the adsense channel name. For example you upload a text file with some ad code in it and the name of the text file of your ad code is adsense1.txt then the name of the adsense channel will be adsense1.txt. In your template you can use to display the adsense code as adsense1(“adsense1.txt”); or adsense2(“adsense1.txt”); or adsense3(“adsense1.txt”);. Actually you can just use adsense1(“adsense1.txt”); for all adsense codes but for your safety just use adsense1, adsense2 and adsense3 function because Google want only 3 ads to be displayed in your page.
